MCA FULL STACK DEVELOPMENT

Practical Report — Question 7

College Event Multimedia Webpage

Course	MCA IBM — First Semester
Subject	Full Stack Development (CAPCMC105T)
Project folder	02_MCA_Lab_2/Q7_College_Event/
Main files	index.html, style.css, media/fest-audio.mp3, media/fest-video.mp4
Evidence	4 browser screenshot(s) supplied

1. Objective

To create a College Annual Fest webpage using semantic HTML5 elements, CSS styling, multimedia controls, and a canvas graphic drawn with JavaScript.

2. Requirements Demonstrated

• **Meta information:** character encoding, viewport, and page description.

• **Page structure:** header, navigation, main content, sections, articles, aside, figure, figcaption, and footer.

• **Navigation:** links to Home, Events, Gallery, and Registration sections.

• **Events:** three event articles covering technical, cultural, and creative activities.

• **Announcements:** important student instructions in an aside element.

• **Multimedia:** audio and video controls with local media file paths.

• **Canvas:** JavaScript draws a background, circles, and event text on the canvas.

• **CSS:** grid layout, spacing, colors, hover states, rounded corners, and a responsive media query.

3. File Structure

```
02_MCA_Lab_2/Q7_College_Event/
■■■ index.html
■■■ style.css
■■■ media/
■■■ fest-audio.mp3
■■■ fest-video.mp4
```

4. Browser Testing and Observations

The supplied browser screenshots show the Utsav 2026 header and navigation, the event cards, announcements, fest illustration, multimedia controls, canvas drawing, registration information, and footer. The audio control shows a track

duration in one screenshot. The video control is visible, but the supplied screenshot does not establish that the video file successfully plays. Confirm video playback in the browser before final submission.

5. Important Limitations

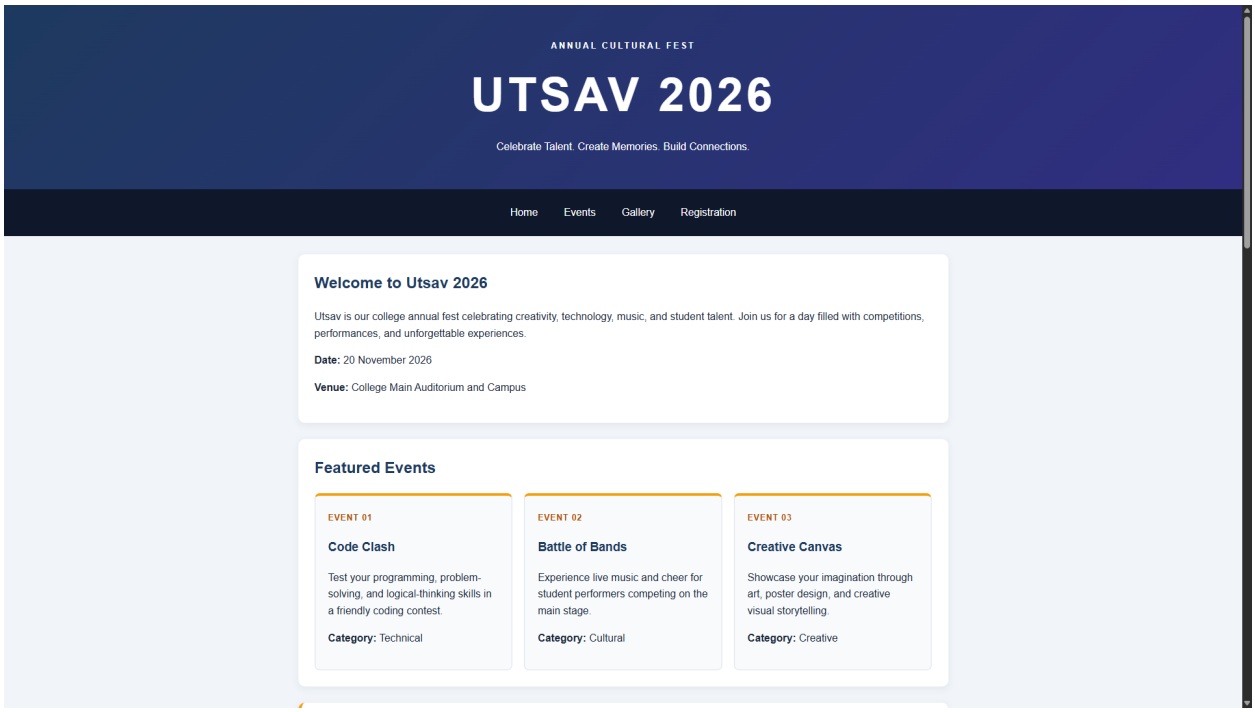

The event registration section is informational and does not submit data to a server. The media controls require valid files at the exact paths shown. The event date, venue, and contact details are sample content and should be changed if your instructor expects actual college details.

6. Conclusion

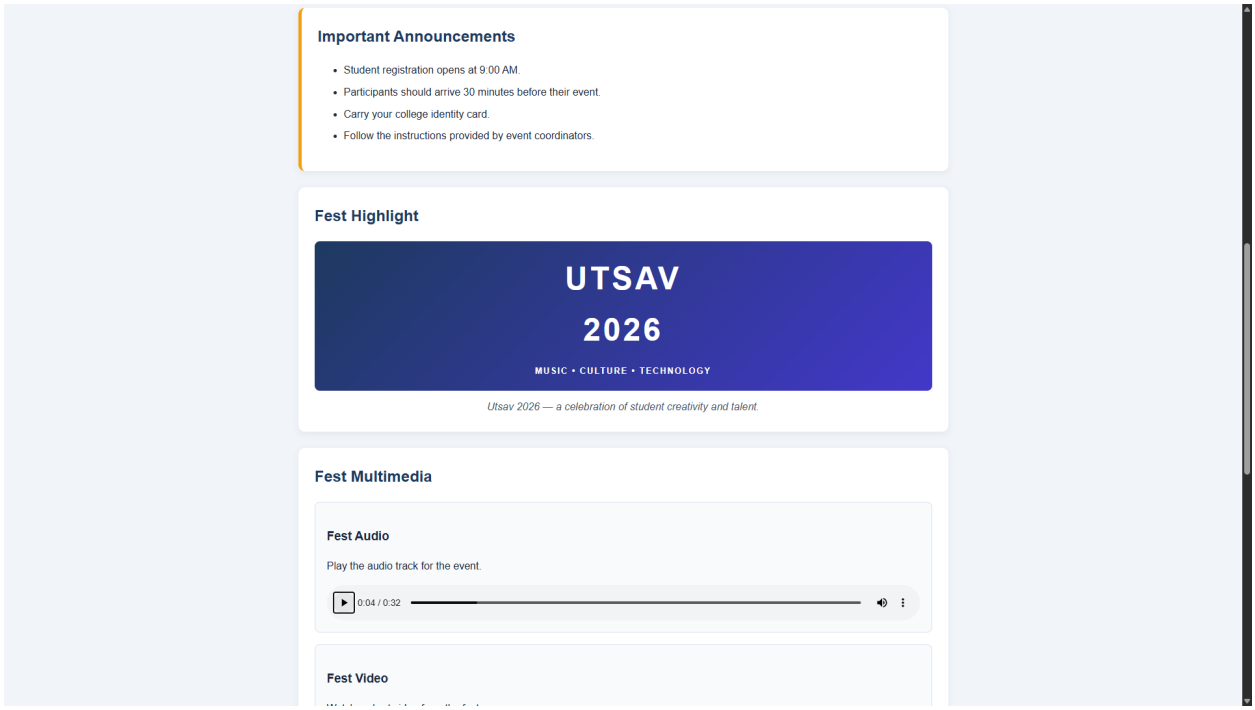

The webpage demonstrates semantic HTML5 structure, internal navigation, event content, an announcements area, figure/caption markup, audio and video elements, CSS layout, and a canvas graphic. Before submission, verify both media files and keep the source files together with the report.
