Q6 — Student Registration Webpage

MCA IBM First Semester • Full Stack Development (CAPCMC105T)

Objective: Create a student registration webpage using HTML semantic elements and a form containing the required input controls.

Technologies: HTML5 and CSS.

1. Practical Overview

The supplied browser screenshots show a styled student registration page with a dark-blue header and navigation bar, a welcome section, registration controls, course information, important instructions, an illustration with a caption, and a contact footer.

2. Required HTML Elements

Element	Purpose in this practical
<meta>	Provides character encoding, responsive viewport, and page description metadata.
<header>	Displays the page title and introductory text.
<nav>	Provides Home, Registration, and Contact links.
<main>	Groups the primary page content.
<section>	Separates the introduction, registration, and illustration areas.
<article>	Contains information about the MCA program.
<aside>	Highlights important registration instructions.
<figure> / <figcaption>	Groups the illustration and its caption.
<footer>	Displays practical information and contact details.

3. Registration Form Controls

The form contains full name, email, and password inputs; gender radio buttons; hobbies/skills checkboxes; a course dropdown; an address textarea; and Submit and Reset buttons. Labels are associated with controls using for/id, while name and class attributes identify submitted values and styling groups.

4. CSS Styling

The page uses a light background, dark-blue header/navigation/footer, white content cards, consistent spacing, rounded corners, form-control borders, an orange accent on the instructions panel, button styling, and a responsive media query for narrow screens.

5. Browser Evidence

The screenshots supplied by the student show the upper page and form, the lower form with course/address controls and illustration, and the information/instructions/footer area.

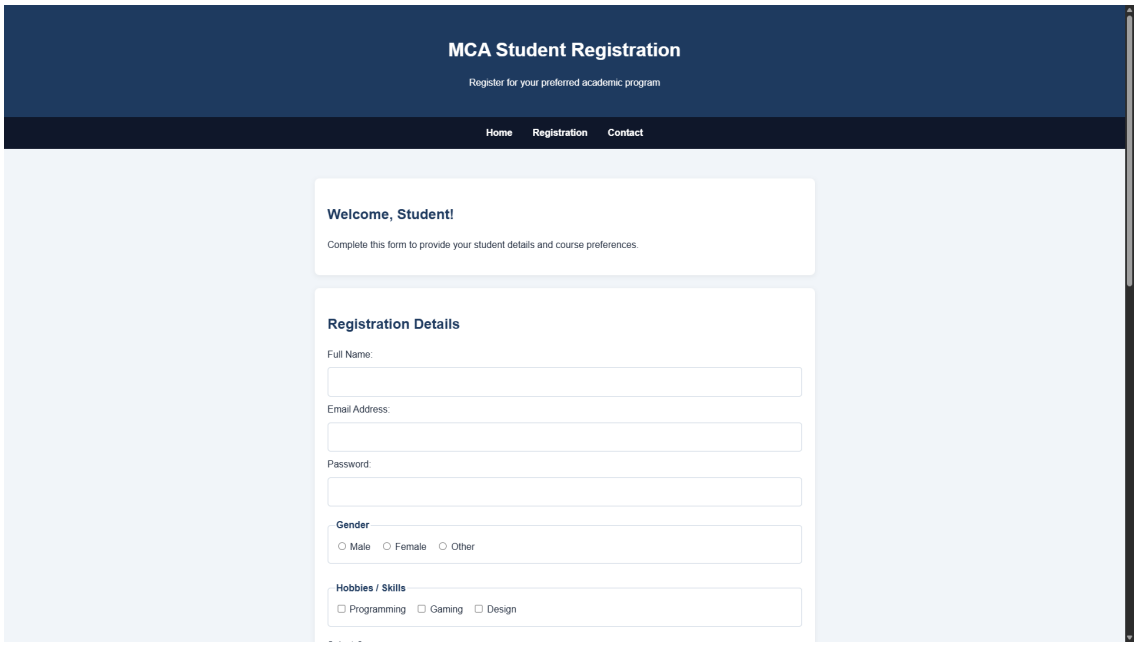

Figure 1. Header, navigation, introduction, and registration form.

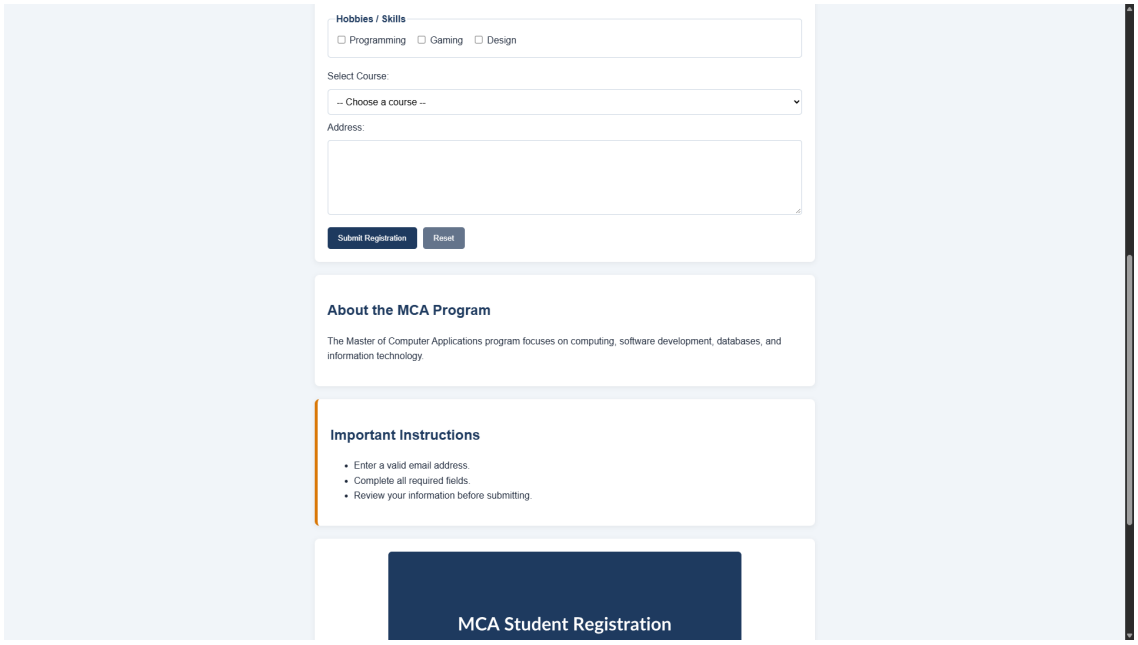

Figure 2. Lower form controls, MCA program information, instructions, and illustration.

Browser Evidence (continued)

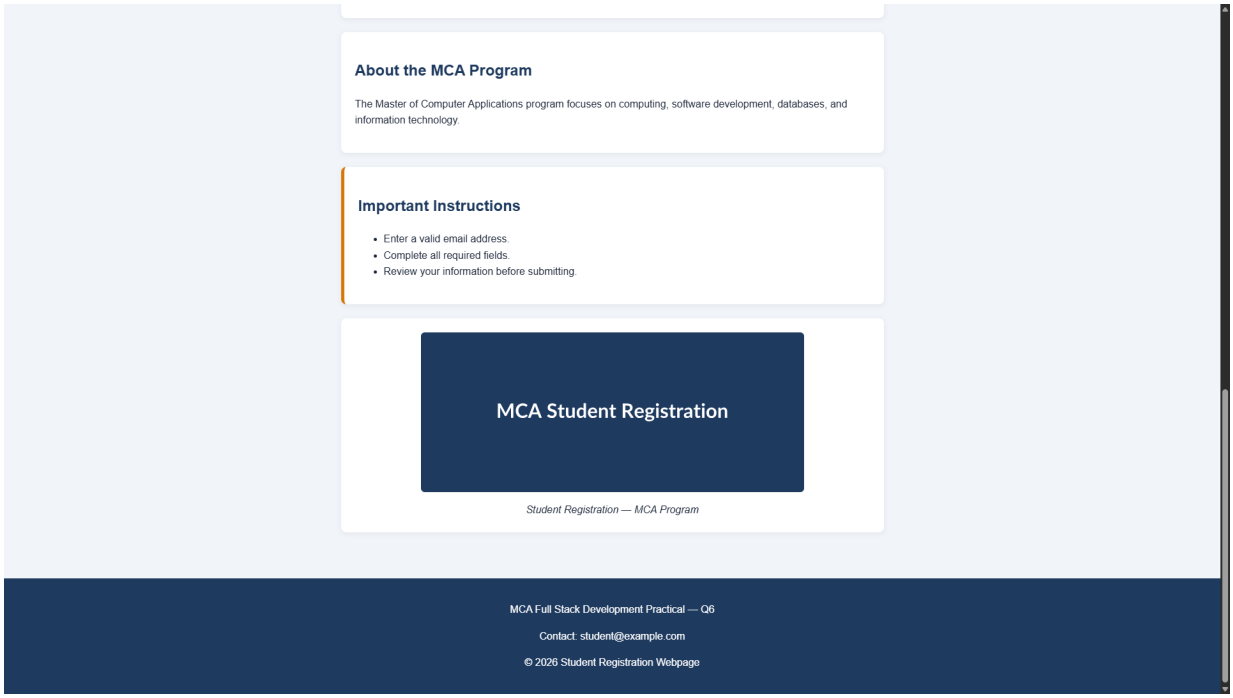

Figure 3. MCA program information, important instructions, figure caption, and footer.

6. Result and Limitations

The supplied screenshots provide visual evidence that the main page sections and form controls render. The form uses action="#" and is a front-end demonstration; it does not save registration data to a server or database. The screenshot evidence does not independently verify every source-code attribute or the server-side behavior.

7. Final Checklist

■ Keep index.html and style.css together in Q6_Student_Registration.

■ Check the Home, Registration, and Contact links.

■ Test required fields, email validation, radio buttons, checkboxes, dropdown, and Reset.

■ Confirm the placeholder image loads; it requires an internet connection.

■ Review the report and screenshots before submitting.
